SMART navigation™

£1,000 /year

*3 months **free** – Conference Offer*

BUILT AROUND THE 2026/27 GP CONTRACT

"Clinically urgent requests must be dealt with on the same day."

SMARTnavigation is how you deliver it.

What is it?

For years, practices have relied on a duty doctor to handle same day demand — a model that's no longer sustainable. Receptionists are the first point of contact but are left making clinical decisions without enough support. SMARTnavigation fixes this.

SMARTnavigation guides patients through GP-designed, condition-specific pathways and supports automatic write-back into the clinical record. This reduces admin, improves triage accuracy, and helps practices manage demand more safely and efficiently.

Use Case

(April 2024–March 2025) from 17 practices, 152,508 patients triaged.

47% of patients were redirected away from the GP.

- **15% to econsultations**
- **12% to community pharmacy**
- **11% to other clinicians (Nurse, HCA)**
- **9% to A&E/WIC**

Age Triage

Each script begins with age related triage adapting the questions to the patients age.

Red Flag Screening

Condition specific red flag patients guide patients away from Primary Care.

Same Day Triage

Same day condition specific questions book patients into same day appointments making the best use of available clinical capacity.

Ambient Voice Technology

In a Leeds practice, we are currently trialling an ambient voice that answers calls, triages patients and books appointments on SMARTnavigation scripts — a digital front door, not a chatbot.

Pharmacy First

Filters patients into bookable appointment slots with a Pharmacist to prevent patient looping.

EMIS Write-Back

Automatic write-back into EMIS — no PDFs, no manual steps. Live rollout.
